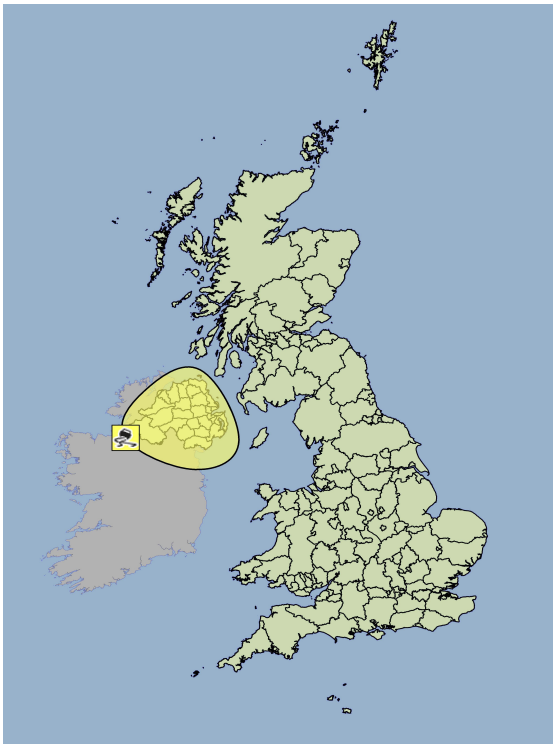
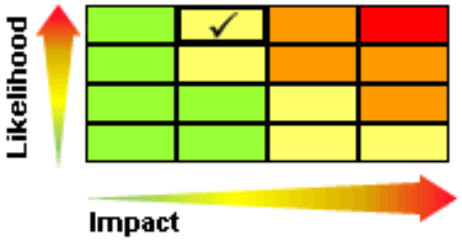
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will track eastwards across Northern Ireland today, bringing spells of rain, sleet, and some snow over hills. As this system clears overnight, skies will clear from the northwest and temperatures are expected to fall below freezing. This brings a risk of ice formation on untreated surfaces. In additional, as the airmass turns colder on Thursday morning, showers feeding in from the northwest may fall as snow to low levels inland.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **03:00 on Thu, 14th Jan 2016** until **11:00 on Thu, 14th Jan 2016**

Outbreaks of rain, with some sleet or snow on highest ground, will clear in the early hours of Thursday morning. Temperatures will then fall sharply leading to icy stretches on untreated roads. Sleet and snow showers will return later on Thursday morning. Please be aware of the potential for difficult travel conditions.
